

EquineLUX Half-Pads models DESCRIPTIONS

ComfortLUX

This half-pad combines all of the advantages of natural and high-tech materials and brings together superior properties of the Merino sheepskin, air-through Non-Slip mesh textile, and 3-Dimensional Spacer fabric. Genuine leather patches reinforce the front side of the half-pad. Open-cell High Resilience (HR) foam shims in conjunction with Merino sheepskin provide efficient shock absorption and optimum comfort. In a word then, ComfortLUX turns horseback riding into an enjoyable and luxurious experience both for the rider and the horse.

MerinoLUX

The combination of the 3-Dimensional Spacer fabric and Merino sheepskin lining does not compromise the saddle fit and allows this half-pad to work as a close-contact, shock-reducing layer between the horse and the saddle. When placed directly on the horse's back, Merino sheepskin lining provides a long-lasting therapeutic effect on horse's skin. The totally breathable 3-D Spacer fabric reduces heat build-up and guarantees high moisture transfer. The durable PolyPro webbing reliably protects half-pad's edges against wear.

BufferLUX

Made with two large size pockets, this half-pad features extra layers of the 3-D Spacer fabric and ensures proper saddle fit by using either custom-made or specialized shims for saddle fitting. BufferLUX half-pad does a perfect job of protecting the horse's back from impact. A pair of the HR foam shims (thickness: 1/2") is included in the package. They allow for the overall weight to be redistributed over a larger area, thus reducing pressure and providing a shock absorption effect. Moreover, this half-pad is reversible, which comes handy if one of the two sides gets dirty.

GripLUX

When GripLUX is placed under the saddle, it fixates both the saddle and saddle pad, preventing them from slipping. GripLUX holds the saddle in the right place and allows the rider to sit firmly in the saddle. Air-through Non-Slip Mesh upper and lining assure perfect grip, while still retaining its breathability. The 3-D Spacer fabric reduces heat build-up, guarantees maximum breathability, efficient moisture transfer and evaporation. High-quality Merino sheepskin trim on the front and rear sides has a stylish look and elegantly defines the shape of the saddle.
