**When you need to feel
good about your choices.**

Old world integrity, new world technology and innovative thinking.

Main Plastics Group Ltd is a company made up of old world talent ensuring quality and new world thinking ensuring performance. As a custom plastic parts manufacturer who provides services to our customers on a contract basis, we recognize there is no room for mediocrity. We know our customers depend on us as an extension of their business so we take the time needed to understand their challenges. Whether the product is intended as a finished item for an end user or part of a product created through another manufacturing process, their success is our success. Our resources include highly skilled engineering staff to work with your design teams and experienced technicians to ensure a high quality mold can be created in the shortest time at a competitive price. We can do full service production runs of finished parts including assembly, decorating, and packaging. Our experience in materials ranging from polymers to engineered resins helps our customers navigate through the more than 30,000 materials options available so you better understand the nuances of any given material under any given set of circumstances. We recognize the importance of ensuring the tooling is always ready for the next production run and offer full in-house maintenance programs to ensure a broken or worn tool won't cause a delay when the next shipment is needed.

We can produce an early stage prototype, create short run samples and give you peace of mind knowing our view is always on the big picture not just the problem at hand. If you are thinking about replacing your metal parts with plastics, we can help guide you in the right direction on what materials will provide the right mechanical thermal and tribological properties as well as chemical resistance for the job.

For those companies with limited capital budgets we offer a number of creative programs to help offset expensive tooling costs which can sometimes put constraints on a project.

Why not call us today and find out why you'll be happy you did?
