

Bendygo, a leader in solar energy development, design, engineer, install and commission including operate and maintain, is highly experienced in working with all authorities related to the several renewable energy programs as a liaison and facilitator between the Customer, the Ontario Power Authority (OPA), local distribution companies (LDC), and local authorities (ESA) to ensure the Customer receives a fast, efficient, and hassle-free experience.

Since 2011, **Bendygo** has successfully completed several rooftop solar PV design-install on residential, commercial, industrial and agricultural under various programs offered by OPA and/or Local Distribution Company, such as local hydros.

PROGRAMS

Need to join the green movement, produce your own power, or get a lasting return on investment? Whether you own a home or business, Bendygo offers a range of programs to suit what matters most to you. Bendygo is the only company offering various programs to accommodate the Client expectations and they are:

MicroFIT

MicroFIT is the Ontario Government Guaranteed Program. The program offer 20-year commitment to purchase power from the residential owners at a pre-fixed rate, which stands much higher than what we pay in today's market for electricity. This ensures you can achieve exceptional market value and helps cover the cost of installation and maintenance. MicroFIT Program is designed for homeowners, farmers and small business owners to help ensure a lasting return on investment for their solar power systems. So, why not convert your roof in to a revenue generator.

FIT

Similar to the microFIT program, FIT projects is designed to help business owners to ensure a lasting return on investment in solar technology. The FIT program is applied for larger-sized solar energy systems. It's a program through which the business, industry, agriculture or community, as an Ontario-based entity, can use the available roof space to expand the value of the property. The return is paid with a set amount for the electricity that the new solar system produces over a 20-year contract. Imagine getting a cheque from the local power company every month to spend on the business and its success! The program supports business sustainability and contribute to the protection of the natural environment!

Net Metering

Every entity whether it is business or community or school, probably sick of having to battle against rising energy costs and ever-larger bills each month. But, there is a way to mitigate the raising energy cost, thus resulting to sustainable operations - Net Metering. All property across Ontario can utilize the Net Metering Program to achieve credit towards their property's energy usage. It's a trade-in style system where the amount of electricity generated from the solar power system supplies is weighted against the amount of electricity the consumed. If the supply is more energy than the use, a credit for future energy use is issued! Energy credits can be used for all energy bills during the following 12 months.

Off Grid

Off grid options are a clear leading choice for homeowners or businesses in remote area and looking to capitalize on solar power technology. Bendygo works with Canadians in remote locations across the province to customize solar systems for their location and their property. Bendygo systems are connected to energy storage systems, where generated energy is used, stored and used on demand. You'll have greener energy available to meet all your personal power needs! It's the ideal solar power solution for those living in cottage country and other remote areas.

BENDYGO FINANCING OPTIONS FOR ALL PROGRAMS

Free Solar Program

Under this option, the Client will make no payments to the Company and receive a One-Time Solar Earning of up to \$4,000 and an Annual Earning of \$100 for the entire term of this Agreement. The One-Time Solar Earning is determined by the system size and the estimated annual kilowatt hours of direct sun exposure the Solar Equipment will receive.

Prepayment Option

Under this option, the Client will make a one-time prepayment to the Company at the time of the execution of this Agreement. Subject to the attached Terms and Conditions, the Client will receive an Annual Return paid yearly for the entire term of this Agreement. The one-time prepayment amount is determined by the prepayment option the Client chooses prior to the execution of this Agreement. The Annual Return is calculated based on the number of kilowatt hours of direct sun exposure the Solar Equipment will receive.

Lease to Own Program

Now, you can own your microFIT system while keeping your financial freedom! By choosing Lease to Own with Bendygo, you can go solar without tying up your cash, credit, or capital. The ability to borrow against home equity will be unaffected. Also, you'll avoid the need to recoup solar equipment costs when you move

Hybrid Solution

Bendygo offers multiple Hybrid Solution to varied customers, across Ontario. The Hybrid Solution comprises of the following options:

1. MicroFIT – Net Metering
2. FIT – Net Metering
3. MicroFIT – FIT – Net Metering Option
4. MicroFIT – Storage System
5. Energy Storage System

Speak to us on your expectations and we would be glad to provide an economical solution for your needs that gives the best rate of return as well mitigate against future energy price increase.
