Storage Unit Sizes

Storage Unit Sizes

If you've not rented a storage unit before and are not familiar with all the different size options, a simple list may not be enough for you. That's why we've created this storage unit size guide to help you choose the right unit. We have listed the various sizes of storage units most popular in the USA and what they are typically used for, along with the kind of items that can typically fit inside.

Common storage unit sizes, measured in feet, are:

- 5x10
- 10x10
- 10x15
- 10x20
- 10x25

- 10x30

Scroll down for an explanation on all of the most common sizes available.

5x5 Storage Unit (25 square feet)

5 ft × 5 ft (1.5 m × 1.5 m), about the size of a large telephone booth

Units that are five feet by five feet measure 25 square feet. They can fit a very **small assortment of small items**. For example, they will fit a few tote bins stacked up, or a few boxes stacked up. They would fit a twin mattress set on its own, or small appliances and nightstands.

Typically, people choose these smallest units when they know they only have a small selection of items to store. You might just need space for your holiday decorations, off-season sporting equipment, a small selection of work documents, or appliances to store for students.

5x10 Storage Unit (50 square feet)

5 ft × 10 ft (1.5 m × 3.0 m), about the size of a large walk-in closet

At 50 square feet, units that measure five feet by ten feet are twice the size of the smallest units. **They could handle a single piece of medium-sized furniture**, things like dressers, kitchen tables and love seats. **If you have a need to store exactly one room of your home's stuff, this may be the right unit for you.**

A queen mattress set would fit in this storage unit. So would a collection of small boxes and totes. Overall, it is enough room to handle small storage needs like your business equipment, your filing cabinets, or small furniture that is important to you.

10x10 Storage Unit (100 square feet)

10 ft × 10 ft (3.0 m × 3.0 m), about the size of a child's bedroom (as of 2015, 10x10's are the most common storage unit size, making up 16% of the distribution in the U.S.)

At 100 square feet, this unit is double the size of a 5' x 10' unit. These units are square and are large enough to hold a single motorcycle, or a king mattress set, or a dining room set. You can, of course, fill it up with various smaller items like your seasonal decoration or seasonal inventory.

These units are commonly used to store things that need to be moved for minor home renovations, to make room in small retail stores, or to get some excess things out of one and two-bedroom apartments.

10x15 Storage Unit (150 square feet)

10 ft × 15 ft (3.0 m × 4.6 m), about the size of a living room

At 150 square feet, units that measure ten feet by 15 feet are 50% larger than 10' x 10' units. **This is the first size that is large enough to help with some residential moving tasks, or small apartments or homes. They can also hold a garage's worth of items if you're doing some garage clean-up.**

These units can hold a whole bedroom set, including a mattress, dresser and clothes. They could hold large dining sets or the furniture in your living room. They can also fit in large pianos, small boats, or a significant amount of business inventory.

10x20 Storage Unit (200 square feet)

10 ft × 20 ft (3.0 m × 6.1 m), about the size of a one-car garage

These units are 25% larger than 10' x 15' units. **If you have a three-bedroom home or larger, then you can use these units** as additional storage for seasonal items, or for items that need to move for a home renovation project.

All of the items mentioned previously can fit in these units. You might also fit in items on skids or pallets, large appliances, and even a vehicle.

10x25 Storage Unit (250 square feet)

10 ft × 25 ft (3.0 m × 7.6 m), about the size of a large one-car garage

At 250 square feet, these units are 25% larger than 10' x 20' units. **Those who have large homes can use these units to store their excess belongings.** The units can hold a wide range of items. Most people choose to fill them with a variety of larger items like mattress sets, items from their basement and garage, even large vehicles.

10x30 Storage Unit (300 square feet)

10 ft × 30 ft (3.0 m × 9.1 m), about the size of a large master bedroom

At 300 square feet, this is the largest storage unit size available. **Those with four and five-bedroom homes will prefer these for storage of their items.** If you are moving overseas or holding a large amount of inventory for a business, this is the unit for you.
